To Whom It May Concern,

Omicron Architecture Engineering Construction Ltd. (Omicron) recently had the pleasure of working with Robertson Walls + Ceilings (Robertson) on the Nordstrom Vancouver Flagship store.

The project consisted of 232,000 sq.ft. of floor space. Within this space is 90,000 sq.ft. of suspended drywall ceiling clouds completed with a Level 5 finish. There were a significant number of owner driven changes that increased the scope of work, including the addition of 26 vendor stores within the store, with no change to the grand opening date. The work was completed without compromising the pristine quality of finish that was called for. In working through the many challenges and complexities of this project, the Omicron team valued the partnership approach and depth of capacity that Robertson brought as a sub trade.

The project was completed on time over a 13 month schedule. Robertson should be proud of their contribution to successfully build out the Nordstrom's Flagship store on an iconic corner in Vancouver.

I would not hesitate to recommend the Robertson team to any Owner or General Contractor for a high end project of this nature.

Yours truly,

George Sawatzky, ASCT
Vice President, Interiors / Retail
